

Erfan Aghdasi

(778) 791-4020 | eea82@sfu.ca | [Portfolio](#) | Vancouver, BC

EDUCATION

Simon Fraser University

Bachelor of Science in Computer Science

Burnaby, BC

Sep 2025 – Present

University of British Columbia

Initiated Bachelor of Arts in Computer Science

Vancouver, BC

Sep 2024 – Sep 2025

EXPERIENCE

Founder & Developer - [Welcome Aide Society](#)

Feb 2026 – Present

- Designed and shipped **35+ interactive guidance tools** (immigration, banking, healthcare, housing) with province-aware filtering and i18n across 21 languages (incl. Arabic/Farsi RTL), reaching **8,300+ users across 50+ countries** in the first **3 months**, including **2,960 Canadian users** averaging **3.5-minute engaged sessions**.
- Architected a retrieval-augmented AI assistant with a custom knowledge-base ingestion pipeline, provider-agnostic LLM abstraction layer, and automatic model fallback system for reliability.
- Built scheduled analytics pipelines to aggregate conversation trends and generate product insights from user behavior data.
- Built a CI/CD pipeline on GitHub Actions: Docker image builds, push to Azure Container Registry, deploys to Azure Container Apps, scheduled analytics cron jobs, and pre-commit hooks auto-translating content across 21 locales.

Web Developer & Digital Marketing - [SilverTouch Renovation Ltd.](#)

May 2022 – Present

- Built and managed the company website, SEO strategy, and Google Ads campaigns, turning the site into the primary source of inbound renovation leads.

Team Lead - Enjoy Technology Inc.

Aug 2020 – May 2022

- Led an 8–10 person local sales team with extended remote support to Calgary and Toronto, delivering the **highest revenue-per-customer in Canada for 12 consecutive months**.

Team Lead, Mobile & Smart Home - Best Buy Canada

Sep 2018 – Aug 2020

- Led a 6–8 person Mobile & Smart Home team to the **fastest sales growth nationwide** and maintained a **Top 5 in BC** for both sales and customer satisfaction.
- Interviewed and trained staff on activation systems and smart-home tech, and strengthened vendor partnerships with Apple, Samsung, Google, Bell, Rogers, and TELUS to secure better product access, staff training and promotional support.

PROJECTS

Fetchi - [fetchi.shop](#)

July 2025 – Present

- Designed and shipped a fashion-aggregator platform serving 650+ monthly users with steady organic growth from search and direct traffic.
- Built a multi-source ingestion pipeline that fetches, parses, normalizes, and de-duplicates **thousands of fashion products** from affiliate APIs into a single searchable catalog, with automatic category detection and region-aware routing as new sources come online.
- Built the catalog browsing experience end-to-end: full-screen faceted filtering, instant client-side updates, and pagination tuned for sub-second response on datasets of thousands of products.
- Designed the PostgreSQL data layer on Azure Database for PostgreSQL Flexible Server: schema, full-text and trigram indexes for product search, partial indexes for region/category filters, and connection pooling sustaining sub-second filtered browses across tens of thousands of products.

Rubik's Cube Solver

- Implemented a **Kociemba two-phase IDA*** solver in Java using object-oriented design principles, navigating the **43-quintillion-state** search space and solving most scrambles in **under 10 seconds**.
- Engineered custom data structures and algorithms: admissible heuristics from precomputed multi-dimensional pruning tables, a compact coordinate-based cube encoding (corner / edge orientation, slice, permutation parity), and a heuristic-ordered DFS with axis-based redundant-move pruning to skip symmetric branches.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, C++, SQL

Frameworks: Next.js, React, Node.js, Express, Spring Boot, Thymeleaf, REST APIs, internationalization (i18n)

Cloud & DevOps: AWS, Azure (Container Apps, ACR), Vercel, Cloudflare, Docker, Git, GitHub Actions, Linux

Data & AI: PostgreSQL, retrieval-augmented generation (RAG), LLM integrations, prompt engineering, Google Analytics
